- Feedback Analysis (Pre & Post Test Comparison)

Testimonials

"The Docker and Kubernetes training provided by Yogesh Raheja has changed my perception of taking training in the corporate world.

One of "the best" trainings I have ever attended so far in my working career."
Nagabhushan Udupa, Ericsson Engineer

It is my immense pleasure to get a chance to interact with Thinknyx, especially with Yogesh. It would be tough to write the entire journey in a few words. The course content was good. I think I have found some parts of me that I had lost. You have been great in the entire program. I like the way you have set no exception to the horizon.

It does not matter how you started, but it matters a lot how you finish. This is the mantra I have learned from the session. Thank you for everything that you have given to us. Please keep sharing all the knowledge with us.
Vinay Mishra, SpringerNature

I feel fortunate to be a part of this course which helped me to learn all the interesting and useful concepts and would like to thank all the efforts that have put in classes to make us understand and implement those using online training session. Practical sessions were very interactive. Really lot of thanks to instructor and very well deserved and knowledge person.
I didn't know anything about AWS/DevOps before joining this program but today things have changed. Thanks "Thinknyx" for the great course. Was able to successfully clear the Thinknyx DevOps Certification
Veerabhadrappa Kokatanur, NEC

"I have known Thinknyx technologies for close to a year now and a number of our teams at Lowe's have participated in Learning programs offered by Thinknyx. They offer learning and certification programs in a wide range of technologies within the Cloud Platforms and DevOps technologies. The faculties are thorough professionals with immense hands on knowledge in the concepts that the deliver trainings on. I was part of one such program and with no technical background, I was able to understand the concepts of Cloud technology within very little difficulty. I want to commend Thinknyx for the excellent job they do and I hope that we get benefited more and more in the future through their learning programs."

Dinesh, Manager – IT Operations, Lowes India

"Its been a pleasure working with Thinknyx Techologies, we partnered with them during our initial phase of monolithic to mircoservices journey. With their help starting from various high level trainings to involvement in projects we have successfully completed migration and are running multiple production workloads to Docker and Kubernetes. The team has also helped us in our Devops journey. The team is highly effecient in all new technologies like Containers, Automation tools, Public Cloud, DevOps and CI/CD."

Kalim Qureshi, Principal Engineer, Continuum Managed Services Pvt. Ltd
